

# Prize in Game Theory and Computer Science of the Game Theory Society in Honour of Ehud Kalai

The Prize was established in 2008 in recognition of Ehud Kalai's role in promoting the connection of the two research areas by an endowment of Yoav Shoham.

It is awarded to the person (or persons) who have published the best paper at the interface of game theory and computer science. Preference is given to candidates of age 45 or less at the time of the award, but this is not an absolute constraint.

At the occasion of the Fifth World Congress of the Game Theory Society held in Maastricht, The Netherlands, July 24–28, 2016, the Kalai Prize is awarded to

**Tim Roughgarden**

for his paper

*“Intrinsic Robustness of the Price of Anarchy,”*

*Journal of the ACM* 62:5, Article no. 32, 2015

for its unifying analysis of the Price of Anarchy in games and its extension to learning.

The Prize consists of a cash award of 2,500 US Dollars, plus travel expenses to attend the Congress.

David Schmeidler

President of the Game Theory Society

The members of the Prize committee, appointed  
by the President, were

Preston McAfee, David Parkes, Éva Tardos,  
and Bernhard von Stengel.
